SUMMARY

Senior Software Engineer with over 8 years of experience specializing in the design and implementation of complex, scalable, and performant front-end solutions. Proven ability to lead projects from architecture to deployment, driving the adoption of modern technologies like TypeScript, React, and Next.js to enhance system quality and maintainability. Passionate about building intuitive user experiences, mentoring junior engineers, and championing best practices in testing, CI/CD, and system observability.

EDUCATION

Bachelor of Science (B.S.) in Computer Science - GPA: 3.4
Minor in Entrepreneurship, *Rutgers University - New Brunswick*

Graduated May, 2016

SKILLS AND QUALIFICATIONS

Programming / Scripting Languages:	Typescript, PHP, Rust, C#, Bash
Front End Web Libraries and Frameworks:	React / React Native, Next.js, Storybook, Svelte, Vue, Angular, jQuery, Cypress
Styling & UI Libraries:	Tailwind CSS, Radix UI, Headless UI, MUI
Backend and Databases:	NodeJS (Effect, Hono, Express), Laravel, Postgres, MySQL, SQLite, Microsoft SQL Server
DevOps & CI/CD:	GitHub Actions, Docker/Podman, Kubernetes (K3S), AWS (EC2, ECS, EKS, Lambda), Rundeck, Nginx, Caddy, Systemd
System Design & Tools:	Monorepo (Turborepo), Microservices, REST APIs, WebSockets, Elasticsearch, Redis

WORK HISTORY

Senior Applications Developer, <i>Rutgers University of New Brunswick, Department of Continuing Studies</i> <i>April 2018 - Present (October 2025)</i>
Leads full-stack web development - Architects, oversees, drives all critical code decisions. Serves as the direct contact for non-technical leaders. Performs code review and manages Junior and Student Developers.
Led the design and implementation of large-scale, resilient front-end solutions for enterprise applications, including a comprehensive HR onboarding platform and a multi-featured marketplace, using React and Next.js.
Evaluates newest technologies for development teams. Plans robust rewrites. Maintains, extends, and modernizes legacy applications, legacy build systems, hosting strategies and deployment strategies
Identified, customized and deployed several open-source services, reducing department costs over \$70,000 yearly.
Introduced Continuous Integration and Containerized Applications via Podman, Systemd, GitHub Actions, and Rundeck
Deployed, configured, and manages an instance of Keycloak to utilize University Identity Providers and User Federations, gaining developers the ability to use an OIDC protocol for the university sign-in.
Built a highly productive web application monorepo utilizing Turborepo, NextJS, Postgres and authentication with university through above mentioned Keycloak instance using NextAuth. Wrote Hiring / Onboarding app with dynamic shared forms, contract generation, DocuSign integration, cli tools, cron, and queue systems.
Utilized AWS EC2 to deploy multi-server solutions for online conferences supporting WebRTC powered virtual classrooms for 400+ attendees on short notice. Has knowledge AWS Ecosystem (ECS, EKS, Lambda...), experience with SST, Ion and Pulumi - Explored and built with Kubernetes, K3S, Rancher, and ArgoCD.
Assembled frontend solutions to show multimillion row datasets seamlessly
Produced paginated search powered by Elasticsearch with filtering tag system driven by Laravel
Created flexible handcrafted chart building system written with D3 and Svelte
Utilized QGIS, D3, and Topojson to create an interactive heatmap library to display NJ Data.
Architected Dockerized ETL pipeline to extract, transform, and compress Oracle database into binary datafile, enabling performant offline use of the PWA frontend.
Published full featured React Native application to Android and IOS app stores which link various native libraries including Firebase drivers to display push notifications
Integrated QR-Code scanning and phone native GL-powered 3d model viewing on multi-platform mobile app. Builds with 3d web layer React Three Fibre for web graphics
Wrote a lean forum system which allowed social interaction of conference attendees with admin dashboard and content filters to help reduce the threat of explicit content.
Coordinated NodeJS Websocket servers, Redis, and PHP for an event system
Handled various PDF invoice generation and payment processing libraries
Utilizes OpenSSL and GPG for flat file encryption
Configures various build tools and linters for PHP and Typescript Ecosystem.
Maintains and configures multiple web server technologies including Nginx, Apache, and Caddy

Software Engineer, *Fusion Health*

August 2016 - May 2017

Developed Full-stack Single Page Web Applications with integration of EMR software, G.E. Healthcare's *Centricity*, for Medical Facilities in Correctional Environments.

Created a robust templating, publishing, and encryption system for legal EMR documents.

Integrated digital signature and fingerprint signature capabilities

Prototyped various applications which have become full-featured products

Scripted Data Migration Software interfacing EMR applications' Pharmaceutical datasets, allowing for accurate transition of inmate prescription data

Technical Intern, *Processor Innovations Corporation*

January 2015 - August 2016

Developed mapping application for calculating and graphing antenna signal strength

Performed data analysis of solar panel purchase and tax records for business intelligence purposes.

Built and repaired old computer towers - Configured Linux servers
